Biohacking and longevity technology for your business

HF Concepts can help you select the right biohacking technologies for your facility, integrate them in a cost-effective manner, and ensure your offering stands out clearly from the competition.

Reach new target groups, attract health-conscious customers who are willing to pay, and generate additional revenue streams with modern longevity and recovery treatments.

A new source of revenue

Longevity and biohacking applications give you access to a rapidly growing segment of the healthcare market.

Clear differentiation

You stand out from competitors who continue to offer only traditional wellness or fitness services.

Customers who come back

Effective treatments with noticeable results encourage repeat visits, treatment packages and long-term customer loyalty.

A partner, not a supplier

HF Concepts supports you every step of the way, from concept and implementation through to scaling.

How does the cooperation work?

Book a consultation

Request information

Once we have received your enquiry, we will send you information about the products you have requested.

Book a personal consultation

Are you interested in acquiring and integrating one or more of our technologies? Please book a personal consultation at a time that suits you via the following link: <https://calendly.com/hf-concepts/30min>

Experience technologies live

If the requirements for cooperation are met, visit us in our showroom in Berlin, test the technologies for your project and get to know our team personally.

Terms of payment

At least 50% of the total price is due when the order is placed, but the remaining amount must be paid before delivery (with the exception of financing via financing providers).

Invoice & financial support

We will then send you our bank details and the invoice. We will support you in the financing process if required.

Long-term support

Ongoing, permanent support beyond the ordering process is also possible.

Events and further training

We regularly invite you to seminars, networking events and training courses at our headquarters in Berlin.

Training and service

Once our technologies are installed and commissioned, our team is available for on-site training and future service issues to support you with any requirements.

Delivery and installation

We deliver your selected technologies after professional planning of the installation conditions and take care of the coordination of the trades.

Business plan and marketing

If required, we can work together to develop your individual business plan, and we can also plan a customized marketing strategy from the website to performance marketing campaigns.

Your experts in

Biohacking and longevity

In today's fast-paced world, where the boundaries of science and technology are constantly being redefined, we are witnessing a new revolution: that of biohacking and longevity products. HF Concepts is at the forefront of this and specializes in this innovative field.

• Longevity

The pursuit of longevity

In parallel with biohacking, there is also the ongoing quest to extend the human lifespan and slow down the aging process. Longevity products are central to this effort.

They include a range of supplements, therapies and technologies that aim not only to extend life, but also to enhance the quality of life in the years gained.

• Biohacking

The optimization of the human body

Biohacking is more than just a trend. It is a movement that aims to understand the biological processes of the human body and to use them in an optimal way. Through targeted interventions, nutrition, exercise, supplements and technological innovations, people are looking for ways to improve their health, performance and well-being.

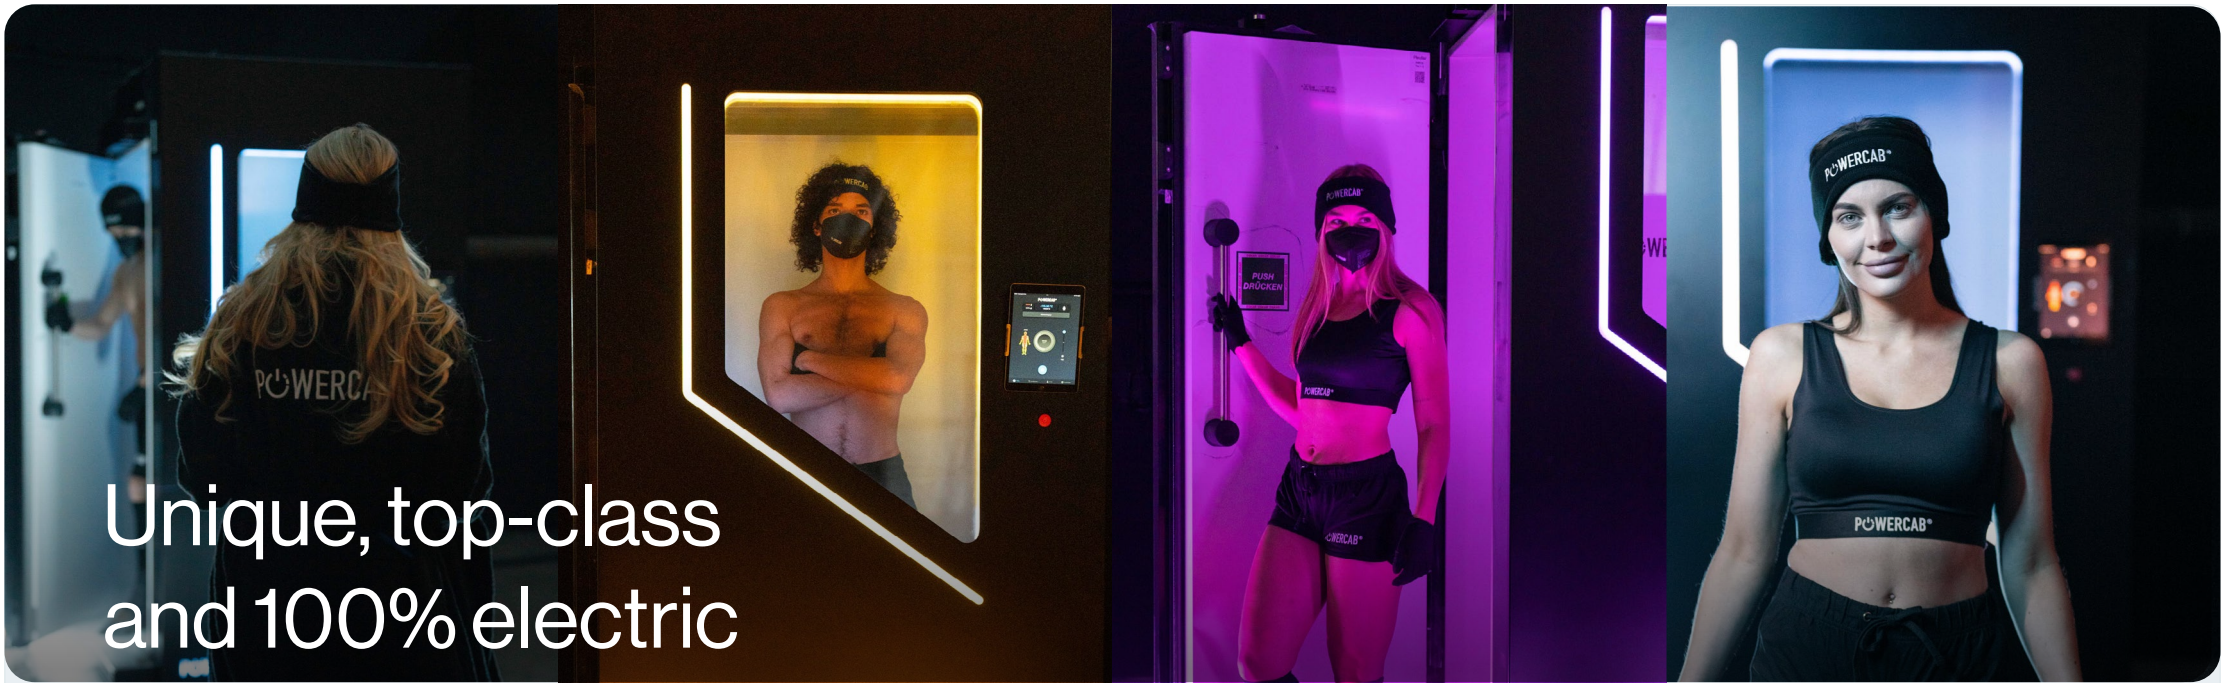

Powercab® cryo chamber

The POWERCAB® Performance offers the simplest, safest and most cost-effective whole-body cryogenic solution on the entire market and is also a visual and technical highlight. It is equipped with the most advanced refrigeration technology currently available and reaches temperatures of up to -110 °C at the evaporator without the use of nitrogen.

During a whole body cryo application, the entire body is subjected to a thermal shock for 3 minutes, at a temperature of up to -110°C. This can bring several positive effects for body and mind.

- Down to -110°C
- 100% electric
- Modern & compact
- Highest efficiency

Unique, top-class and 100% electric

The POWERCAB® makes it possible to achieve the best effects in only one chamber! Unlike comparable products, it no longer requires a multi-chamber system, which is associated with enormous costs and reconstruction measures.

It also offers continuous cooling, adjustable ventilation speed, advanced software as well as comparatively low power consumption. The user-friendly software offers a wide range of options while remaining intuitive and easy to operate.

All this, coupled with exceptional cold storage technology ensures that the customer experiences the best possible cooling, as well as the thermal shock essential for the exceptional effects, as no cold is lost on entry.

- Low energy consumption, averaging just 3.5 kWh
- Enhanced cold retention thanks to a patented air curtain
- Cold room with space for up to two people
- New innovative sound system
- Customised interface with partner software is possible
- 100% made in Germany
- A visual highlight with customisable colour settings
- Less wear and tear thanks to optimised production processes
- New POWERCAB® software with personalised medical history and treatment duration

FAQ

Areas of application

- Health and Wellness
- Sport and Recovery
- Pain management
- Beauty and anti-ageing
- Dietary support

Technical features

Controllable via app, automatic programmes, built-in digital display, Bluetooth sound system, LED lighting system, automatic drying, timer integrated into the software, heated glass, adjustable ventilation, remote support / remote maintenance

Installation

Our POWERCAB® can be installed in two different ways

Version 1

Version 2

Prices

Profitability

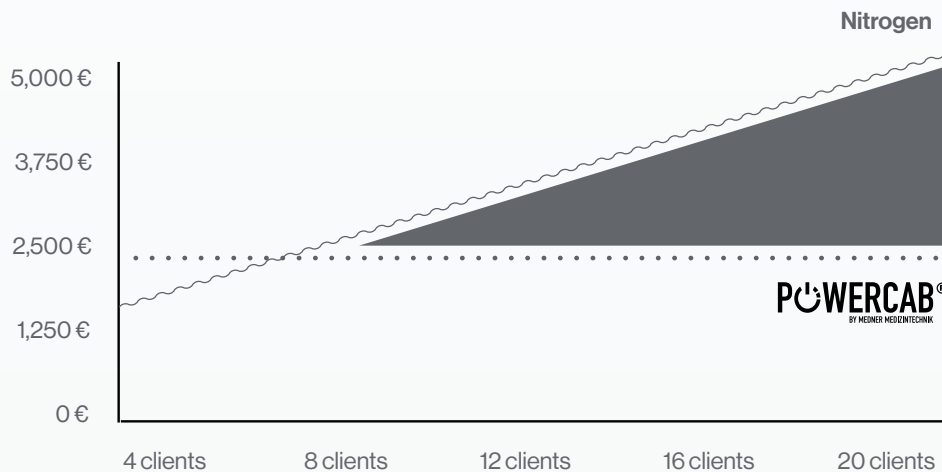

Comparison POWERCAB vs. conventional cryo chamber

The POWERCAB® is the leader in energy efficiency, costing approximately 50% less electricity than comparable refrigeration chambers. In order to protect the environment, the POWERCAB® also uses 100% natural refrigerants and thus achieves the lowest GWP score.

All calculations are based on cooling for 12 hours a day. The costs of the additionally required chiller are not considered in this calculation.

Tip: Electricity prices can be further reduced by joining a purchasing group.

Higher economic efficiency already with 8 applications per day.

POWERCAB® vs. nitrogen cab

Compared to the nitrogen cab, the POWERCAB® already offers greater cost-effectiveness with 8 applications per day. Even in view of the longer operating time and the higher leasing rate.

Calculation basis POWERCAB®

Acquisition cost: 99.990 EURO

Leasing rate: 1.750 EURO

Operating costs: 500 EURO/month

30 days per month

Calculation basis Nitrogen Acquisition cost: 50.000 EURO

Leasing rate: 760 EURO

Operating costs: 8 EURO/application

(incl. all costs)

30 days per month

AVACURA®

AVACURA® is more than just an innovative device - it is a smart system for modern health concepts. Developed for medical practices, rehabilitation centers, hotels, biohacking studios and discerning private users, AVACURA® combines the latest findings from physiology, thermoregulation and biofeedback technology.

The unique combination of heat, cold and negative pressure via the palms of the hands opens up new ways of regeneration, prevention and performance enhancement - without medication, without invasiveness, without effort.

- Thermo-Contrast Technology – the interaction of cold and heat to specifically activate bodily functions
- Intelligent biofeedback system – Automatic adjustment of the application based on physiological responses
- Negative pressure module for promoting microcirculation – For a significantly deeper and more effective result
- Compact, low-maintenance design – ideal for everyday use – portable, quiet and user-friendly

Your Health in Your Hands

One device – endless possibilities

AVACURA® was developed with the aim of making therapeutic effects measurable and at the same time offering maximum suitability for everyday use. The combination of targeted temperature stimulus, pressure change and real-time analysis via sensor technology enables applications that can be flexibly adapted to different health goals - whether for regeneration, performance enhancement or long-term health promotion.

Thermal module with precision control

The heart of AVACURA® is the precise control of heat and cold stimuli - precisely dosed and controlled via the palms of the hands. The individually adjustable intensity allows personalized applications for different target groups and indications.

Vacuum chamber with controlled negative pressure

The innovative pressure control generates a gentle negative pressure in the hand chamber. This biomechanical component improves blood circulation, optimizes the absorption of stimuli and makes the application noticeably more effective than conventional systems.

Integrated biofeedback system

AVACURA® uses an integrated HRV measurement to draw conclusions in real time about stress levels, the ability to regenerate and the balance of the autonomic nervous system. The application is then automatically adapted to the current physiological state - for precise, individualised stimulation and traceable progress towards resilience, relaxation and performance.

AVACURA® sets new standards

Scientifically sound, developed with practical application in mind

AVACURA® is based on the latest findings from physiology, neuroregulation and lifestyle medicine - developed in close cooperation with experts from the fields of medicine, sports and health technology. The result: a system that works and is easy to use in everyday life.

A holistic effect achieved through a targeted combination of stimuli

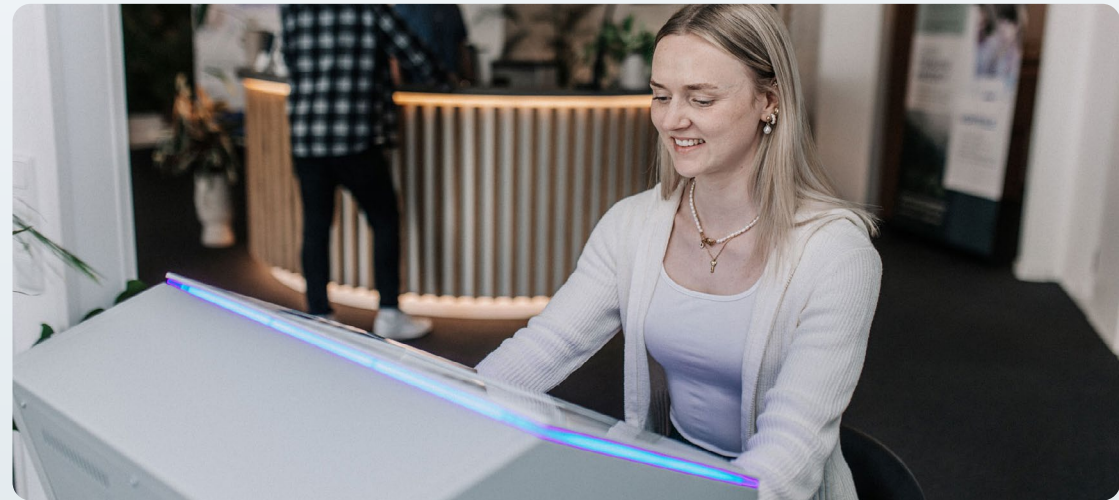

Heat, cold and negative pressure work synergistically and activate central regeneration processes in the body. The focus is not on one symptom, but on the natural regulation of the entire organism - effectively, profoundly and sustainably.

Versatile – from medical practices to private spas

Whether in medical facilities, wellness concepts or for exclusive private use: AVACURA® blends seamlessly into any environment. Quiet, space-saving, design-oriented - and above all: intuitive to operate, without any specialist knowledge.

User-friendliness & Design

AVACURA® is intuitive to operate, low-maintenance and aesthetically pleasing. The modern design blends seamlessly into any environment - whether a practice, studio or hotel. It requires no changing room or preparation and can be easily integrated into existing workflows.

hypoxbreath® IHHT Training

hypoxbreath® is the latest IHHT training system from one of the world's leading manufacturers.

The hypoxbreath®'s intelligent biofeedback system relies exclusively on tried-and-tested control algorithms that have already proven their worth in various clinical trials and studies.

In addition, independent, dual-redundant fail-safe systems ensure maximum operational reliability for your customers. This ensures that oxygen saturation and O₂ concentration in the breathing air remain within the preset range at all times.

- Biohacking
- App control
- Leading technology
- The highest quality standards
- Intelligent Biofeedback System

Our best IHHT/IHT system at the best price

hypoxbreath® is the IHHT/IHT system for those who value quality, decades of experience in medical device manufacturing, technological advances and the best service.

Maximum operational reliability

Independent double redundant fail-safes guarantee maximum operational safety. Thus, oxygen saturation and O₂ concentration in the breathing air always remain within the preset range.

Intelligent Biofeedback System

An intelligent BIO-Feedback System relies exclusively on control algorithms that have already been proven in several long-term clinical tests and studies.

Fast and precise control response

The compact component design ensures an exceptionally fast and precise control response.

Measurement inaccuracies are avoided

Ambient-based measurement inaccuracies due to temperature increases during instrument operation are consistently avoided by technical innovations.

Flexible monitoring

The mobile operating unit allows more flexible monitoring of the user in practice operation. If you value low-radiation technology, we offer the terminal solution as an alternative.

- Made in Germany – The highest quality standards
- Hypertension deactivation function
- Selectable training mode: hyperoxia or normoxia
- Real-time measurement and clear display of biological parameters
- Full O₂ range: Hypoxia/normoxia/hyperoxia (7.5% (med) / 9%–19% / 21.9% / 22–34%)

FAQ

HaloCab® Human Supercharger

HaloCab® combines several proven applications in one integrated system. Salt-rich air, targeted red light, ionised oxygen, harmonious frequencies and aroma diffusion work together within a closed cabin to create a controlled environment for relaxation, regeneration and sensory balance.

The system was developed to simultaneously address different sensory levels and enable a holistic user experience. HaloCab® is suitable for modern wellness, regeneration and longevity concepts and can be seamlessly integrated into existing studio or practice concepts.

- 5-in-1 system in an enclosed cabin
- Multisensory application
- Designed for professional environments
- Intuitive user interface for professional use
- High-quality materials and a modern, space-saving design

HALOCAB®

Longevity Innovation

THE HUMAN SUPERCHARGER

The unique 5-in-1 Longevity System from HaloCab®

Red light

Targeted red and near-infrared light.

Supports cellular activity, blood circulation and regenerative processes through the delivery of precise wavelengths.

Salty air

A controlled, saline environment.

Promotes comfortable breathing, skin balance and a clear, calm breathing experience.

Ionised oxygen

Oxygen-enriched airflow.

Designed to support respiratory comfort, energy levels and overall physiological balance.

Frequencies

Harmonious sound vibrations.

Designed to promote relaxation, focus and balance in the nervous system.

Aroma

Gentle aroma diffusion. Complements the sensory experience and supports emotional balance and session immersion.

A well-thought-out system design

HaloCab® was developed as an integrated, end-to-end solution. Technology, design and application work in tandem to deliver a consistent, high-quality user experience in professional environments.

A Space for Regeneration and Balance

HaloCab® creates a protected space in which multiple sensory stimuli are specifically combined. The simultaneous application of different elements creates an immersive experience that appeals to the body and perception without overlaying individual stimuli.

The system is designed for regular use and can be flexibly integrated into wellness, health and longevity concepts. HaloCab® offers a structured, reproducible environment and supports modern approaches that focus on relaxation, regeneration and prevention.

Areas of application

- Wellness and relaxation centres
- Longevity and biohacking concepts
- Spa and hotel treatments
- Health-focused gym programmes

HaloCab® combines technology, design and sensory quality into an integrated solution for holistic well-being.

FAQ

HaloRed™

Introducing HaloRed™!

HaloRed™ is the only product that combines both Salt Therapy and Red Light Therapy - in one compact, professionally designed unit! The synergy of the two modalities, when used simultaneously, is tremendous and backed by research and our patent!

At a glance

- Combination therapy: salt and red light therapy in one device.
- Red light therapy: skin rejuvenation, reduction of inflammation, boosting the immune system, improved sleep.
- Salt therapy: helps with respiratory conditions, skin conditions, allergies and headaches.
- FDA approval: Red light devices approved as Class II medical devices.

HaloRed™ has a lens beam angle of 60 degrees, a 230V/13A power supply, all glass surfaces are made of 8 mm toughened safety glass and an integrated Bluetooth audio system.

Halotherapy – HaloGX™ halogenerator

This revolutionary new halogenerator delivers salt therapy with the highest efficacy by creating the ultra-fine salt particles. HaloRed™ has been optimized to include the Halotherapy Solutions HaloGX™ halogenerator.

Red light therapy - Red light panels

The powerful devices provide scientifically validated wavelengths of deep red (630-660 nm) and near infrared (830-850 nm) light from above, front and the sides. Red light is absorbed by the skin, boosting collagen production & aiding skin conditions. Near infrared penetrates deeper aiding muscle recovery, cellular renewal and joint pain. F.D.A. approved as Class II medical devices.

Benefits of red light therapy

- Improves respiratory health
- Skin rejuvenation / anti-ageing, promotes collagen production, reduces wrinkles
- Reduces inflammation
- Promotes ATP production
- Supports regeneration
- Boosts the immune system
- Improves sleep
- Reduces stress
- Improves brain function

Benefits of salt therapy

- Relief of symptoms associated with asthma, bronchitis, allergies and other respiratory conditions
- Relief from rheumatic conditions, headaches and migraines
- May help with skin conditions such as psoriasis, atopic dermatitis, eczema, acne and fungal infections
- May improve overall immune function
- Promotes relaxation and well-being; helps relieve sleep problems, tiredness and stress

wellsystem® RedWave Pure

Photobiomodulation is already firmly established in US professional sports. wellsystem® RedWave Pure is the latest generation of full body application “Made in Germany”, combining red light and near infrared. The biopositive effects are proven by numerous studies and medically supervised application observations.

- Over 4,400 high-performance LEDs
- Wavelength ranges: 630 nm + 660 nm + 850 nm
- Full-body treatment with red light and near-infrared light

**MADE
IN
GERMANY**

Photobiomodulation in Sport and Physiotherapy

For use in sports and physical therapy, red light is recommended in combination with deeper acting near-infrared to benefit from systemic deep effects. Photobiomodulation can increase performance, prevent muscular fatigue and accelerate recovery. The effectiveness of red light and near-infrared has been confirmed by over 1,000 scientific studies.

Light application before sports performance increases blood circulation and promotes the build-up of ATP in the mitochondria. After sports, the regeneration of muscles and connective tissue is promoted and metabolic activity is increased, which is shown, for example, by a faster breakdown of lactate. Before physiotherapeutic measures, the deep-acting light may help accelerate the recovery of the musculoskeletal system.

- Pre-conditioning of muscles, bones, fasciae and joints
- Improved performance through better blood circulation and increased ATP production
- Stimulation of fibroblasts to produce elastin and collagen
- Faster recovery and support during massages and physiotherapy

Prices

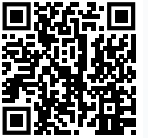

RedWave Pure available from €26.900 net plus VAT
RedWave Plus available from €30.600 net plus VAT
Costs for delivery, installation, training or special requests will be charged separately.

Lumivera

Photobiomodulation of the highest standard

Photobiomodulation uses specific light wavelengths in the red and near-infrared spectrum to target processes at a cellular level. What matters is not only the wavelength, but above all the combination of intensity, coverage area, and application duration.

LUMIVERA translates this principle into a well-designed system. Individual panels enable precise, localized applications, while the combination of a red light bed and large-area panels allows for full-body exposure, evenly, without repositioning and without interruption. This creates an application that can be adapted exactly to the respective use case, from targeted treatments to complete full-body coverage.

- Even light distribution across the entire body surface
- Combination of multiple wavelengths in a single system
- High power density thanks to dual-chip LED technology
- Easy to structure and integrate into existing processes

Photobiomodulation: precisely controllable and scalable across large areas

The application with LUMIVERA can be configured in different ways depending on the setup. Individual panels are used specifically for local areas and can be positioned flexibly. In the extended configuration, the combination of a bed and a large panel creates a continuous full-body application, where the entire body is treated simultaneously. The application duration is clearly defined and can be integrated into existing workflows. Due to the uniform irradiation, manual adjustments or repositioning during the session are no longer required.

Technology that grows with your needs

LUMIVERA can be flexibly integrated, combined, and expanded within existing workflows. From targeted applications to a full-body solution, the system adapts to different requirements and evolves alongside your concept.

Full-body system solution

The combination of a red light bed and a large panel enables simultaneous irradiation from above and below, without changing position

Modular and expandable

Individual panels complement the system in a targeted way and allow for customized application concepts depending on specific needs

Wide-area lighting

Large treatment areas ensure even coverage and consistent results

Targeted photomodulation for localised and large-area applications

Not every application requires a full-body solution from the start.

The smaller panels from LUMIVERA offer a flexible entry into photomodulation and are suitable for targeted treatments on specific body areas as well as for larger, wide-area setups.

Thanks to the graduated panel series, the technology can be selected to match the available space, concept, and intended use. This creates a system that can start locally and be expanded in a structured way when needed.

Areas of application

- Physiotherapy & Rehabilitation
- Longevity and biohacking concepts
- Sport, Recovery & Performance
- Health-focused gym programmes
- Beauty, anti-ageing & aesthetic treatments
- Modern practice concepts & health centres

LUMIVERA represents photobiomodulation therapy of the highest clinical standard. Nine wavelengths, dual-chip LED technology and certified quality – for measurable results.

NanoVi® Cell Regeneration Treatment

The latest addition to the European market

NanoVi®'s innovative cell regeneration treatment can be used to specifically activate the body's own repair processes.

NanoVi® helps the body to repair itself.

By emitting targeted, bio-identical signals, the device stimulates the formation of ordered water, which is essential for protein folding and cell function.

No chemicals, no invasive procedures – just humidity and electromagnetic pulses. The treatment is comfortable, safe and highly effective for combating oxidative stress and low energy levels.

NanoVi® technology is a state-of-the-art application that helps the body meet its individual needs for oxygen and energy.

- Activates the body's own repair mechanisms
- More energy and mental clarity
- Gentle, non-invasive treatment
- Innovative technology with a scientific basis

How the cell regeneration treatment works

NanoVi® technology is designed to support the process of protein folding within our cells. Proteins only function when they are folded. The problem is that oxidative stress continuously damages folded proteins. This damage accumulates, leading to reduced performance, ageing and chronic diseases. In our cells, the surface (or zone) of the proteins that comes into contact with water must be in a specific state for protein folding to take place.

The NanoVi® device creates this specific condition on the surface of water droplets within an air stream. The droplet surfaces contain ordered water, also known as the exclusion zone (EZ), which you inhale when using the device.

NanoVi® supplements the naturally produced EZ water on the surface of proteins to support protein folding and, ultimately, their function. Thanks to the unique properties of the water in our bodies, the effects of the NanoVi® device are transmitted by the EZ water droplets through the mucous membranes to all the proteins in every cell. Through this process, NanoVi® technology stimulates a biological process that occurs naturally within our cells, thereby enhancing overall cellular activity.

- Recovery & Performance Enhancement
- Burnout prevention & low energy levels
- Mental wellbeing
- Anti-ageing & Wellness
- Supportive healthcare measure
- Prevention of cellular ageing

Prices

NanoVi® Exo available from 14.390€ net plus VAT.

Costs for delivery, installation, training or special requests will be charged separately.

Financing

Of course, you can also conveniently have the units financed by our partners or a partner of your choice.

Technical details

Dimensions (WxDxH): 450 x 370 x 275 mm

Weight of the base unit: 20 kg

Output power: max. 20 W

Power density: 0.15 W/cm²

Power supply: Voltage: 110–240 V

Frequency: 50–60 Hz

Input power: 33–168 VA

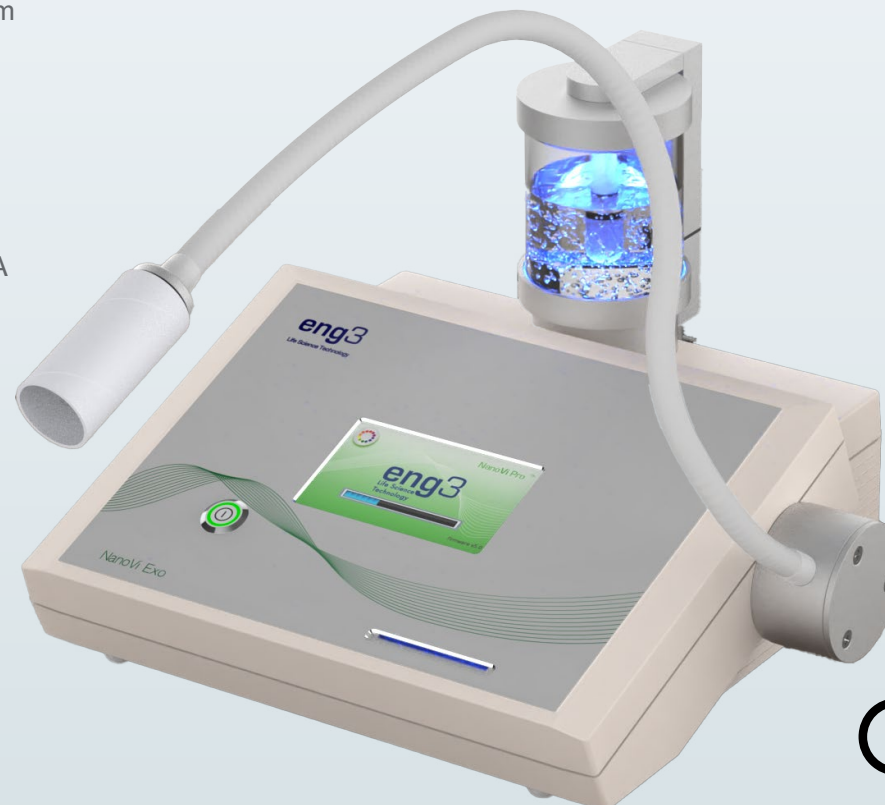

Insulation: Class I, Type BF

FAQ

NanoVi® helps you support your body's nutritional needs, even during periods of intense physical exertion.

- Amateur sportspeople or competitive athletes
- People under significant pressure at work or at home
- People with acute or chronic illnesses
- A person with a weakened immune system
- Smoker
- Older people

Oxyhelp HBOT

Oxyhelp enables the inhalation of pure oxygen in a hyperbaric chamber, thereby increasing the oxygen concentration to many times the normal level in order to activate the body's natural self-healing abilities.

Under pressure conditions of 1.5 ATA, the lungs can absorb many times more oxygen. Under normal conditions, the oxygen content in our arteries is 100 mm Hg. By using the hyperbaric chamber, the oxygen content in our arteries rises to 1400 mm Hg. This is a 14-fold increase on the normal level. In this way, the body can utilise the increased oxygen content.

Hyperbaric oxygen therapy for

- Sport
- Anti-ageing
- Neurology
- Relaxation
- Rheumatology
- Complementary therapy
- Medical rehabilitation
- Wounds and burns

- **Oxyhelp Premium Chambers**

OXYHELP chambers are designed and manufactured to very strict technical specifications to ensure high quality and safety. Furthermore, Oxyhelp manages to combine ease of use with the highest quality, making it easy to operate the system, even at home.

Once the set pressure has been reached, it is time to relax and enjoy a stable, peaceful environment with elevated pressure and pure oxygen.

The benefits of hyperbaric oxygen therapy

- Boosts the immune system
- Helps injuries heal faster
- Reduces swelling and inflammation
- Promotes the regeneration of damaged tissue
- Promotes the growth of new blood vessels
- Promotes the recovery of brain and nerve cells following injury (hypoxic penumbra)
- Stimulates the production of the body's own stem cells
- Boosts the body's ability to fight off infections
- Helps the body eliminate toxins
- Supplies the tissue with up to 14 times more oxygen
- Stimulates collagen production and speeds up the wound-healing process

Healthier with every breath

Ideal for a variety of settings

- Sports centres
- Beauty salons
- chiropractor
- Wellness and Spa
- Gyms
- Orthopaedic clinics
- Personal use
- Holistic Medicine Practice

FAQ

Pelvipower™

The PelviPower™ system offers an innovative training method for strengthening the deep muscles of the pelvic floor. By utilising magnetic field technology, PelviPower™ enables effective and noticeable muscle contractions that can be performed during a comfortable and non-invasive session lasting 15–20 minutes. The areas of application are diverse and include improvements in incontinence and back pain, as well as specific training support for new mothers and athletes. This technology aims to improve quality of life by strengthening the core muscle system, thereby actively supporting the health and well-being of users.

- Women
Menopause | Libido
- Men
Vitality | Sexual potency
- Young mothers
Postnatal recovery
- Sport
Performance | Stability
- Incontinence
Urinary incontinence | Dribbling
- Back
Relaxation | Strengthening

A strong pelvic floor can be of great help in many ways

The entire musculature of the pelvis, as well as the hip, buttock and thigh areas, is exercised. A repetitive magnetic pulse stimulates and relaxes the pelvic floor muscles on a neuromuscular basis. The micro-massage effect stimulates blood circulation throughout the torso and in the lower lumbar region, as well as boosting the metabolism.

New – An innovative way to train the deep core muscles.

Simple – in your everyday clothes, sitting comfortably, for 20–30 minutes per session.

Effective – Up to 25,000 contractions deliver a clearly noticeable effect – gentle, safe and effective.

Please note: PelviPower™ pelvic floor training is not a substitute for consultation with a doctor or therapist if there is a medical indication.

Gharieni

Binaural Vibroacoustic Systems

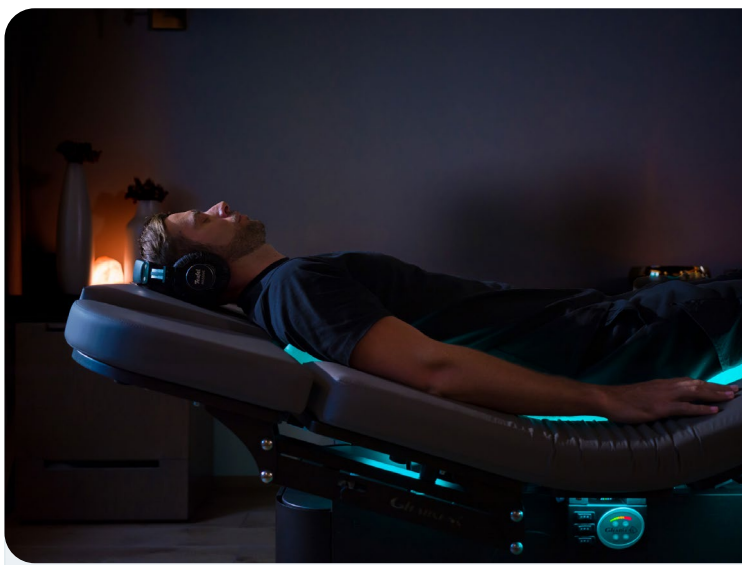

Music and the sounds of nature transport you to another place: these luxurious loungers offer you the magic of music and vibrant tactile sensations that transport you to another dimension.

Choose from carefully curated activity programmes or your favourite music, and set off on a journey like no other.

The combination of auditory and targeted tactile sensory experiences ensures that anyone seeking relaxation will be happy to return time and again.

- Awaken your senses
- Take some time out from the stresses of everyday life
- Unleash your creativity
- Rediscover the power of sound
- Experience deep relaxation and awaken your inner energy
- Reconnect with your body, mind and soul

An extraordinary experience

Gharieni systems use natural vibration and binaural sound therapy to fully synchronise body and mind. They are used worldwide in the most exclusive wellness centres, clinical healthcare facilities, behavioural health clinics, and therapy and rehabilitation centres.

This combination of mental and physical stimulation is a powerful and effective tool for altering neural pathways and developing healthy behaviours. It has been medically proven that vibroacoustic therapy has a positive effect on the mood and behaviour of people who are recovering from stress, anxiety, sleep disorders and addiction, and who wish to reduce stress and find it easier to relax.

Gharieni RLX Satori offers a non-invasive method for eliciting consistent

and positive therapeutic responses without the use of medication, dietary supplements, mechanical aids or electrical stimulation. Gharieni RLX Satori utilises a specially developed technology that releases specific sound frequencies which are projected into the body, whilst synchronous binaural sound and music design, sometimes in combination with guided meditation, guides brainwave patterns into a state of relaxation, meditation, sleep and optimal brain concentration.

Applications of the systems

- Support in coping with chronic stress
- Deep relaxation for stressed-out people
- Reducing the symptoms of stress and anxiety
- Improving the atmosphere
- Improving sleep quality
- Scientifically proven

Zerobody Dry Floating

Zerobody Dry Floating is an innovative and patented system designed to rejuvenate both body and mind. It is an effective and flexible method of dry floating therapy and is the result of extensive scientific research into the benefits of floating in water: fully clothed and without getting wet, the body floats on more than 400 litres of warm water.

- Pre-workout and post-workout station
- Power Nap (cognitive health)
- Visualisation (focus, breath control)
- Float training (mental training, passive physical training, recovery from injury)

Dry Floating therapy harnesses the benefits of floating to revitalise the body and mind in a simple, versatile way that is suitable for everyone. Zerobody Dry Float is the only system in the world that harnesses the benefits of reduced gravity. This technological innovation promotes regenerative wellbeing and has a positive impact on: stress, muscle and joint pain, sleep, concentration and psychophysical recovery.

- Muscle recovery
- Reducing stress levels
- Decrease in respiratory rate
- Reduction in heart rate variability

Professional sports clubs and other customers from all over the world rely on Zerobody – so what are you waiting for?

The LA Rams, San Francisco 49ers, Carolina Panthers, Cleveland Browns, NY Mets, Minnesota Vikings, San Francisco Giants, FISC NYC, University of Florida, FC Südtirol and many more use Zerobody every day – don't miss out on the unique benefits of dry floating and bring Zerobody to your facility.

FAQ

Zerobody Cryo

Zerobody Cryo is revolutionising the world of cryotherapy. The innovation lies in the simplicity of use: the body is enveloped by a patented membrane without getting wet. It is a non-invasive, safe form of cold therapy at a temperature of 4 to 6 degrees. Furthermore, this solution provides easy access to the concept of cold therapy and offers the same benefits for the body as traditional cryotherapy or ice baths.

Zerobody Cryo also provides a pleasant cooling sensation and allows users to enjoy the comfort of dry floating.

Once connected, Zerobody Cryo cools the water to 4–6°C and is ready for immediate use. The device also stands out for its low energy consumption and sustainability.

The benefits of cold therapy

Cold stimulates the immune system and metabolism by cooling the epidermis. The physiological effects of cold promote a general sense of well-being and offer specific physical and mental benefits.

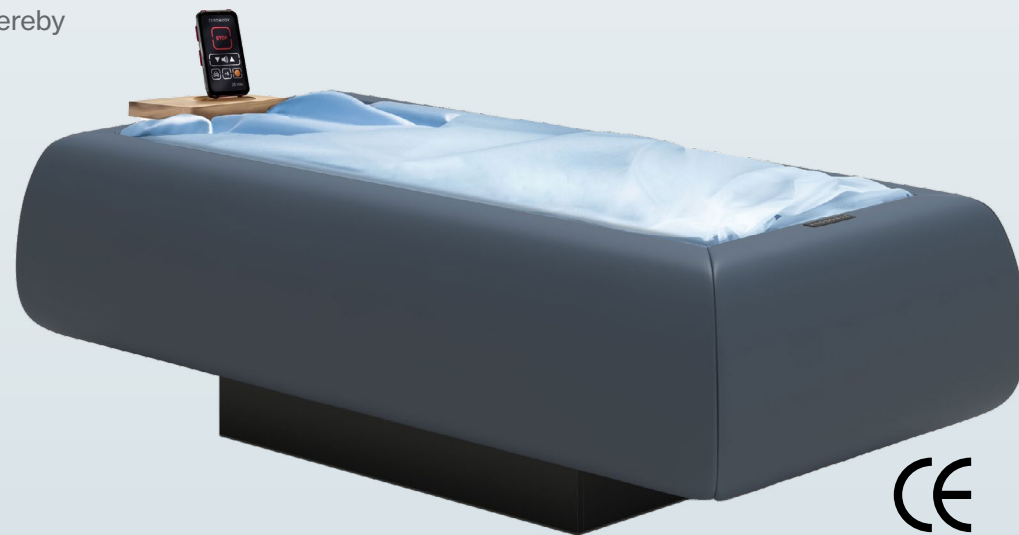

- rejuvenates the epidermis
- promotes rapid and effective recovery during exercise
- Relief from muscle and joint pain
- stimulates the production of endorphins, thereby reducing stress levels

Patented membrane

The patented membrane enables efficient heat exchange and offers the benefits of nitrogen cryotherapy and ice baths.

Touchscreen display

Use the touchscreen to select the duration and start the session. The platform enables weightless floating and autonomous control.

Human Regenerator Jet

A product that is unique worldwide, using plasma technology (CAP technology) to promote your health.

CAP technology has been used in dermatology for decades to regenerate skin cells in cases of wounds, burns and tumours. The plasma design used by the Human Regenerator Jet, however, penetrates deep into the tissue and therefore supports regenerative processes throughout the body.

A revolutionary process that will delight you and your customers.

- unique, cold, atmospheric plasma technology
- a gentle, comfortable, risk-free, purely physical treatment
- easy to operate and use
- no programme settings required
- the highest quality and finest materials

Renewable technology

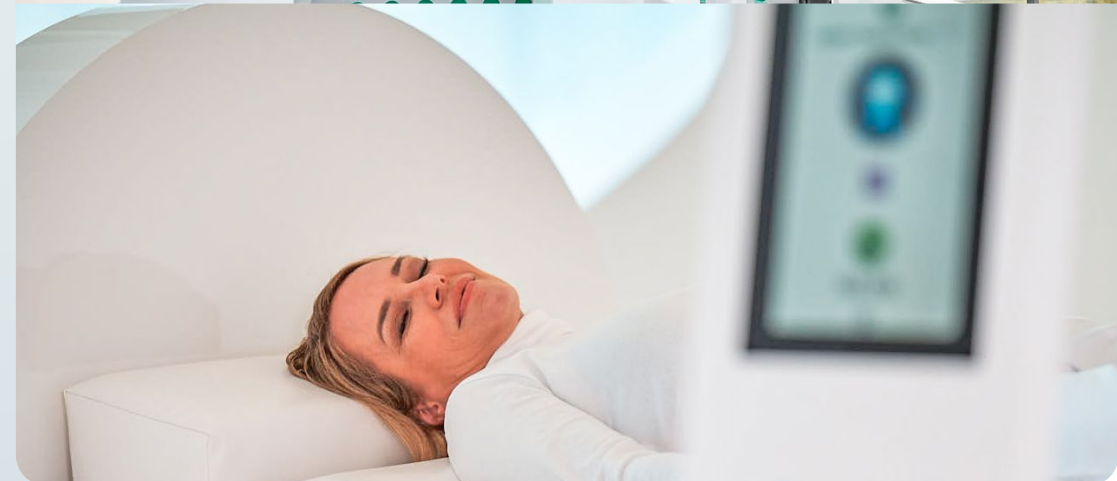

The Human Regenerator Jet is a globally unique physical system that effectively combats oxidative stress and thus helps to counteract ageing and degeneration.

The unique plasma design uses static energy and anions to supply the entire human body with countless electrons in a targeted manner. This transfer of electrons is a direct, gentle and effective way of counteracting the degenerative effects of oxidative stress.

In addition, the Human Regenerator Jet also supplies the cells with static energy. During the session, the user feels a pleasant static field.

Use the Human Regenerator Jet for preventive care or to aid recovery. Recharge your batteries or become one with the elements.

During use, the user is put into a meditative and relaxed state. The technology has also been used therapeutically and post-treatment in clinics for many years, with excellent results and no known side effects to date.

Prices

Human Regenerator Jet for private customers available from 142.000€ net plus VAT

Human Regenerator Jet for commercial customers available from 156.000€ net plus VAT

Liposana3[®]

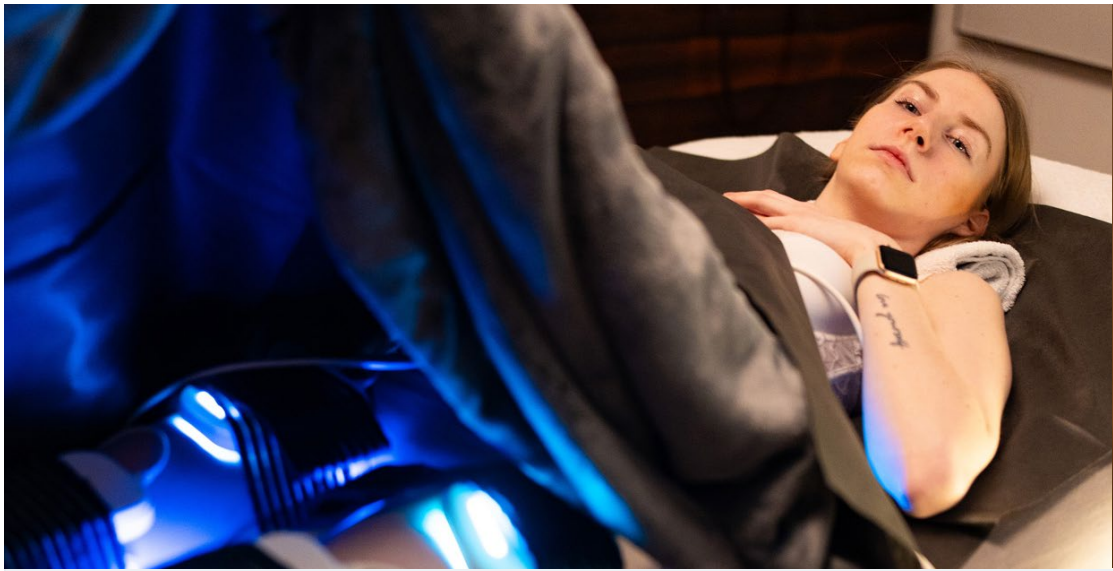

The technology behind the Liposana 3 is the result of more than 35 years of research and development. It combines Italian sophistication with Swiss precision to create a product that brings together aesthetics, medicine and therapy in a single device.

The Liposana 3 concept can therefore promote health, enhance appearance and have a positive effect on the general well-being of your clients and patients.

This innovative combination of device technology and the holistic approach of the Liposana 3 strategy achieves far more significant and measurable results than conventional bio-frequency systems.

- measurable results
- long-lasting immediate effect
- Patented frequency technology
- Intuitive, simple and self-explanatory operation
- Unique and highly effective technology
- A competitive edge through the innovative combination of patented technologies

The Liposana 3 device technology utilises three patented frequency patterns

A wide range of applications

Liposana 3 delivers rapid and lasting results across a wide range of specialist fields through its combination of ultrasound, neuromuscular stimulation and lymphatic activation. Thanks to its patented technologies, Liposana delivers powerful and measurable results, setting it apart from conventional bio-frequency systems on the market.

The successful Liposana 3 strategy combines Liposana 3 frequency technology with a holistic approach that delivers lasting and measurable results in the fields of beauty, aesthetics and well-being.

Health promotion and prevention

- Support for metabolic activation
- Use for muscle building and regeneration
- Treatment to stimulate the lymphatic system
- Promoting improved local blood circulation

Health promotion and aesthetics

- Support for fat loss
- Promotion of anti-ageing
- Support for body shaping and slimming
- Used for facial and body skin tightening

Up to 5 technologies in a single device

- LLLT laser (low-level laser therapy)
- Electroprotration
- Electrostimulation
- Photobiomodulation
- Ultrasound

FAQ

reLounge Back Therapy

Unique on the global market, with a distinctive design – the future of back pain treatment. reLounge combines the most proven methods for treating back pain in a single system: muscle training via electrical muscle stimulation (EMS), pain relief using TENS, and heat therapy – all based on a soothing deep massage. The treatment table offers a holistic treatment concept that not only alleviates symptoms but tackles the root cause directly. The ergonomic lying position ensures a maximally effective training experience. With reLounge, you experience therapeutic expertise at the touch of a button.

- 4-in-1 application
- Clinically proven technologies
- Comprehensive back training programme
- Quick payback thanks to an attractive service package
- Smart System – therapeutic expertise at the touch of a button

Effective back training combined with a perfect business concept

The solution to back pain

reLounge is a response to the widespread problem of back pain and has been developed to offer a simple, safe and effective solution in a single system. The focus has been on the latest innovations and tried-and-tested methods from the medical and healthcare sectors.

With over 15 years' experience in the fitness and health sector and feedback from thousands of clients who have successfully trained and received treatment, a holistic approach has been developed that delivers maximum results with minimum effort. Discover a system that forms part of a visionary solution to back problems.

- Effective muscle therapy using electrical muscle stimulation
- Soothing deep tissue massage
- Rapid pain relief with TENS
- Heat to relax the muscles and improve blood circulation
- Easy creation of custom programmes
- Contactless and easy to use
- Award-winning, non-invasive relief for back and neck pain

FAQ

Mechanical lymphatic drainage

The lymphatic system transports excess fluid, proteins and metabolic waste products from the tissues back into the bloodstream. During this process, the lymph is filtered, cleansed and concentrated, with important immune responses taking place in the lymph nodes.

If these transport pathways are restricted, fluid can accumulate in the tissue, manifesting as oedema or hardening. When the tissue is under strain – for example, due to inflammation, injury or metabolic waste products – the lymphatic system plays a key role in removing these substances. The more effectively this process is supported, the faster the body can regenerate.

The combination of mechanical compression and deep infrared heat stimulates lymphatic flow, promotes blood circulation and supports the body's natural detoxification processes.

- Promote detoxification
- Strengthen connective tissue
- Recover more quickly
- Improve blood circulation
- Shape your body and reduce your waistline

24 overlapping pressure chambers

The system operates with 24 overlapping pressure chambers that create a uniform and rhythmic compression wave. This specifically stimulates lymphatic flow and enables a continuous treatment without backflow.

At a glance

- 4 programmes
- 5 pressure settings
- 4 temperature settings
- Adjustable application time
- Low staffing costs

Prices

Dermio Care© Plus

Dermio Care© Plus is an innovative treatment system that combines dermionological technology with targeted coloured light therapy. In a controlled environment, the facial skin is enveloped in plasma enriched with negatively ionised oxygen whilst being treated with selected light frequencies.

The system is based on natural processes, such as those that occur in nature after thunderstorms or near waterfalls. The aim is to create an environment that appeals to both the skin and the senses. Dermio Care© Plus is suitable for professional use in beauty salons, wellness centres and holistic skincare programmes.

- A combination of Dermionology® and coloured light
- Treatment within a closed top-head unit
- A multisensory application for the face and perception
- Designed for professional beauty treatments
- High-quality materials and a modern, space-saving design

Two technologies. One integrated system.

Dermionology®

Ionised oxygen plasma is generated from the ambient air and directed onto the skin via the top head.

The surfactant-based plasma is easily absorbed through the skin and supports physiological processes at the epidermal and subcutaneous levels.

Coloured light therapy

In addition, coloured light of different wavelengths is used.

The targeted application of light affects the skin and the senses, adding a sensory and aesthetic dimension to the dermatological treatment.

A new skincare experience

The combination of Dermionology® and coloured light creates a calm, harmonious treatment environment that appeals to both the skin and the senses. Dermio Care® Plus can be easily integrated into existing treatment routines and is designed for regular professional use.

Blue light

Used in cosmetic applications where a clarifying and balancing effect is desired.

Red light

Used in a cosmetic context to support the skin's regenerative processes.

Green light

It supports balancing processes and is often perceived as harmonising.

Areas of application

- Beauty salons and spas
- Wellness and spa treatments
- Holistic skincare approaches
- A complement to existing facial treatments

Prices

Dermio Care© Plus available from 9.200€ net, plus statutory VAT.
Costs for delivery, installation, training, or special requests are charged separately.

Financing

Of course, you can also conveniently have the units financed by our partners or a partner of your choice.

Technical details

Operating voltage: 230 V
Frequency: 50–60 Hz
Power consumption: 35 VA
Air flow rate: < 30 l/min
Ionisation capacity: > 5 million negative ions per cubic centimetre
Dimensions: 450 × 390 × 140 mm (L × W × H)
Controls and operation: Control unit with integrated touchscreen, pre-set automatic treatment programmes, service interval indicator
Automatic application time: 10 to 45 minutes

Weber Medical Endolaser®

The Weber Medical Endolaser® is a laser system for professional medical applications that has been CE-certified since 2005. The modular system enables both traditional superficial laser treatments and minimally invasive applications, including intravascular blood irradiation and intra-articular laser therapy.

By using different wavelengths, biological processes can be specifically activated at the cellular level. Furthermore, the system can be used for photodynamic therapies and can be flexibly integrated into modern medical and regenerative treatment approaches.

- CE-certified medical system
- Modularly configurable and expandable
- Superficial and minimally invasive laser treatments
- The use of multiple wavelengths with distinct effects
- Suitable for regenerative and integrative therapeutic approaches

Biological effects at the cellular level

Low-level laser therapy using the Weber Medical Endolaser® acts directly on the body's mitochondrial energy production and key regulatory mechanisms. The targeted application of light activates biochemical processes that produce regenerative effects both locally and systemically.

The focus is on stimulating mitochondrial function, resulting in a significant

increase in ATP synthesis. At the same time, microcirculation and tissue oxygenation are improved, inflammatory processes are modulated, and pain-associated signalling pathways are positively influenced.

Overview of therapeutic effects

- Stimulation of mitochondrial function
- Activation and regulation of the immune system
- Improvement of microcirculation and reduction of blood viscosity
- Increased oxygen supply to tissues and cells
- Anti-inflammatory effects
- Effective pain relief
- Mechanisms of antimicrobial action
- Activation of stem cells and growth factors

A wide range of applications in modern medicine

- Metabolic disorders
- Chronic exhaustion and fatigue
- Cardiovascular diseases
- Acute and chronic pain, including fibromyalgia
- Inflammatory diseases
- Infectious diseases
- Autoimmune diseases
- Degenerative and inflammatory joint diseases
- Slow-ageing and longevity medicine

FAQ

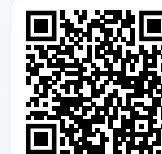

Weber Medical WeberBrain®

The WeberBrain® is a sophisticated laser system for transcranial photobiomodulation. When infrared light is applied to the scalp, it passes through the skull and is absorbed by the mitochondria in the brain's cortical structures.

Targeted light absorption leads to increased ATP production, improves cerebral blood flow through the release of nitric oxide, and boosts the brain's oxygen supply. At the same time, metabolic waste products are cleared away more efficiently and neuro-inflammatory processes are reduced. The altered neuronal environment promotes antioxidant effects, increased neuroplasticity and the activation of the body's own stem cells.

- Transcranial photobiomodulation using genuine laser technology
- Laser diodes only, no LEDs
- Optimised penetration depth thanks to a state-of-the-art lens system
- Simultaneous activation of multiple therapeutic signalling pathways
- Direct application to the scalp via funnel-shaped light outlets

FAQ

Areas of application

- Cognitive impairments and memory problems
- Brain fog and mental exhaustion
- Neurodegenerative diseases such as Alzheimer's, dementia and Parkinson's
- Depression, stress and exhaustion
- Post-stroke rehabilitation
- Traumatic brain injuries and PTSD
- Neuroinflammatory processes
- Prevention of age-related cognitive decline

Prices

Weber Medical WeberBrain® analysis available from 12.500€ net plus VAT. Costs for delivery, installation, training or special requests will be charged separately.

Financing

Of course, you can also conveniently have the units financed by our partners or a partner of your choice.

Technical details

Wavelengths: 650 nm, 808 nm, 1064 nm
684 diodes
Output: approx. 36W

from
12.500€

Scaneca

SCANECA offers a precise and rapid 3D body analysis that provides a detailed visualisation of posture, balance and body metrics. Using state-of-the-art technology, SCANECA enables evidence-based training and therapy solutions.

During a brief measurement process, SCANECA uses state-of-the-art sensor technology to capture a highly accurate 3D representation of the body's surface. All results are clearly visualised, including posture, balance and health-related metrics such as BMI, body fat and waist-to-hip ratio.

- 3D avatar: a virtual replica of the body providing a comprehensive overview.
- Precise posture detection: Automatic measurement of distances, angles and balance.
- Body measurements: Analysis of weight, body fat percentage, BMI, FFMI and more.
- Lightning-fast measurement: fully automatic, contactless and in just 30 seconds.
- Progress tracking: Motivation through measurable achievements.
- Compact and portable: easy to install, ideal for physiotherapy clinics, gyms and healthcare facilities.

SCANECA is revolutionising the way we carry out body analyses. In just 30 seconds, the system takes an accurate, contactless measurement of your body and visualises the results using a highly detailed 3D avatar. Whether in a gym, a physiotherapy practice or a health centre, SCANECA is the ideal solution for modern and efficient analyses.

Precision at the touch of a button

SCANECA captures data with millimetre precision and provides a comprehensive analysis of posture, balance and body measurements. This gives you accurate results that are easy to understand and can be put into practice straight away.

Unique visualisation

SCANECA's 3D avatar provides an objective view of the body. Customers can view their body from every angle, identify problem areas and see their progress up close.

Time-efficient and contactless

In just 30 seconds, SCANECA performs a fully automatic, contactless analysis. This speed and simplicity make the system unique for any application.

Compact innovation

Thanks to its simple assembly and disassembly, SCANECA is portable and versatile. Developed and manufactured in Germany, it stands for the highest standards of quality and reliability.

Prices

Scaneca body analysis available from 18.990€ net plus VAT. Costs for delivery, installation, training or special requests will be charged separately.

Financing

Of course, you can also conveniently have the units financed by our partners or a partner of your choice.

Technical details

Load capacity: 160 kg

Power supply: 220V

Net weight: 45 kg

Interfaces: USB, LAN, Wi-Fi

Product width: 81 cm

Product height: 200 cm

Product depth: 116 cm

Platform height: 7 cm

Measurement method: Infrared technology

Number of sensors: 4 cameras

Measurement duration: 30 seconds

from
18.990€
plus VAT

FRAS 5

The system analyses the oxidative balance and indicates whether free radicals and antioxidant capacity are in equilibrium. This highlights an area that plays a key role in healthy ageing, regeneration, resilience and preventive health strategies.

For professional practitioners, this provides a powerful tool for consultation. FRAS 5 can complement health checks, support personalised programmes and facilitate progress monitoring. Rather than offering general recommendations, it provides a concrete basis for discussions about diet, supplementation, exercise, recovery and lifestyle.

- Analysing free radicals
- Assess antioxidant capacity
- Understanding redox status

Measuring oxidative stress

Determine redox values

Oxidative stress is one of the key topics in longevity, prevention and performance. At the same time, it remains an abstract concept for many clients, patients or athletes as long as no specific figures are available. FRAS 5 provides clarity in this very area. The system analyses free

radicals and antioxidant capacity using a small blood sample taken from the fingertip. The results help to determine an individual's redox status and can be used as a basis for advice, monitoring progress and implementing targeted measures.

Measurability rather than guesswork

Many longevity and preventive health programmes focus on cell health, regeneration and oxidative stress. FRAS 5 makes these topics more tangible, as relevant redox values can be measured and recorded directly.

Programme progress monitoring

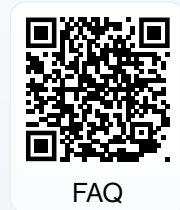

By taking repeated measurements, it is possible to determine whether a particular measure, training plan, change in diet or recovery programme is having the desired effect.

Better advice based on personal values

Nutrition, supplementation, training, recovery and lifestyle can be discussed in greater detail if the focus is not just on symptoms or goals, but also on the current oxidative status.

Stronger positioning in the longevity market

Organisations that integrate FRAS 5 are expanding their range of services to include a scientifically based health assessment module. This helps to provide a higher standard of advice and makes longevity services more transparent.

FAQ

Prices

FRAS 5 from 7.790€ net plus VAT

Costs for delivery, installation, training or special requests will be charged separately.

from
7.790€
plus VAT

Financing

Technical details

Test ranges: d-ROMs quick test, PAT test, SAT test, OSI index, OBRI index

Spectral range: 505 nm wavelength

Centrifuge speed: 6,000 rpm \pm 5%

Display: Backlit touchscreen display

Power supply: 100 to 240 VAC, 50 to 60 Hz

Printer: Built-in graphics printer, 384 dots per line, thermal paper

Power consumption: 60 VA

Protection class: IP30

Dimensions: 400 x 265 x 130 mm

Weight: 2.6 kg

Massage lounge

Premium massage chairs: luxury and a weightless massage experience

Offer your customers an unrivalled relaxation experience with our premium massage chairs. These chairs are the epitome of luxury and ensure maximum comfort during the treatment.

Why choose a premium massage chair?

- Unparalleled comfort
- A high-quality massage experience
- Innovative design and ease of use
- Adaptability
- Full-body air pressure massage

Find well-being

Pure relaxation

Relieves tension and soothes aching muscles after a hard day.

High-quality massage

With bionic massage rollers and 38 airbags, the chair simulates a genuine spa massage for the neck, shoulders, waist, back, legs and feet. The rhythmic air pressure movements promote blood circulation and increase the oxygen levels in the blood.

Innovative design

A modern, easy-to-use piece of furniture.

Shiatsu massage

Enjoy a professional Shiatsu massage in the comfort of your own home.

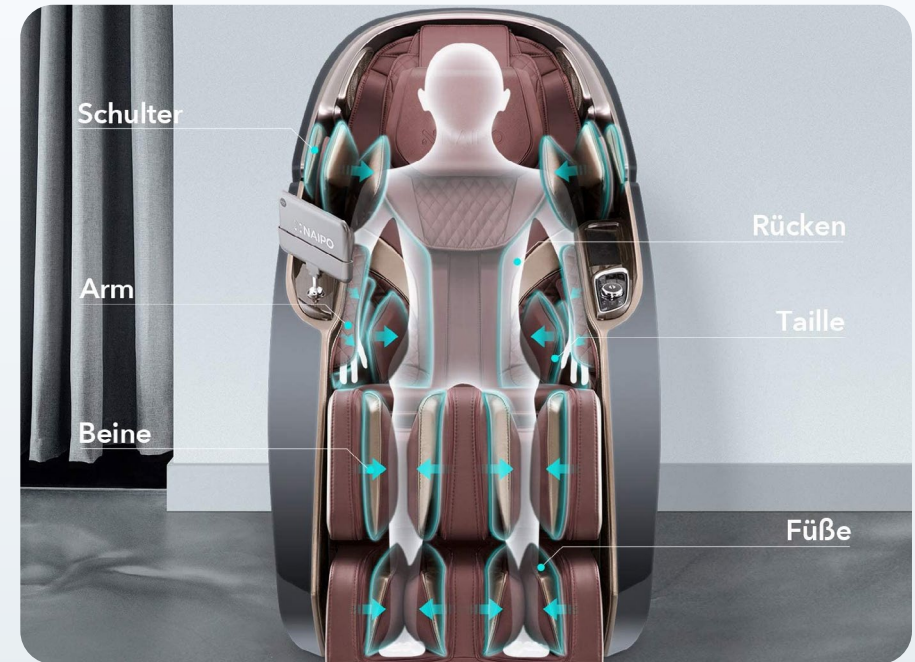

The ultimate full-body massage experience

3D body scan & graphene heating

It moulds perfectly to your spine and provides warmth for your back and calves.

12 automatic programmes & custom settings

8-inch touchscreen control panel and quick-access console in the armrest. Choose from a range of techniques and programmes for a personalised massage.

Prices

Massage lounger available from 2.500€ net plus VAT.
Costs for delivery, installation, training or special requests will be charged separately.

Financing

Of course, you can also conveniently have the units financed by our partners or a partner of your choice.

Technical details

Colour: White and gold

Types of massage: Shiatsu, tapping, kneading

Body areas: back, hips, waist, legs, feet

Hardness: Soft, Medium, Hard

Operating levels: 5

Infrared function: Yes

Energy supply: Grid operations

Product dimensions: 170 cm x 85 cm x 125 cm

Weight: 169 kg

Contents: Massage chair, instruction manual, mains plug

from
2.500€
plus VAT

Supercharge Yourself

Exclusive access to premium longevity products

Supercharge Yourself is an innovative, high-quality network dedicated to prevention, performance and holistic wellbeing. The platform brings together clinically validated products, cutting-edge research and expertise from the fields of medicine, biohacking and biotechnology.

We are committed to providing evidence-based solutions for cellular energy, regeneration and healthy ageing – safe, tested and ready to use. Supercharge Yourself supplies specialist practices, clinics, biohacking studios and medical spas with everything essential for modern longevity programmes.

We are setting new standards in prevention and health: from NAD+ and Methyl Blue to exosomes, vitamin infusions and innovative antioxidants.

- NAD+ – to support cellular energy and vitality
- Vitamin infusions – individually tailored combinations of micro-nutrients
- Exosomes – innovative approaches to research and development
- Methyl Blue – for specialist applications
- and other high-quality longevity technologies

Pioneers in longevity and health

Exclusive benefits for professionals

Doctors, therapists and healthcare professionals who use Supercharge Yourself benefit from:

Access to certified premium products

From NAD+ and Methyl Blue to vitamin infusions – all products are laboratory-tested, clinically proven and tamper-proof.

Continuing professional development

Regular updates on research, treatment approaches and product innovations – through online seminars, specialist workshops and networking events.

Transparent security

- Tamper-proof original seal
- Barcode for online verification
- Full traceability and protection against re-imports

Networking & exchange

Supercharge Yourself connects doctors, biohackers and therapists worldwide. This promotes the practical exchange of knowledge and improves patient care.

More than just products – a comprehensive concept for your practice

- Expert advice from experienced longevity specialists
- Personalised treatment plans & dosing regimens
- High availability & chilled express delivery
- Early access to new innovations

Heart Rate Analysis

Get a comprehensive overview of your physical and mental health in just a few minutes. The Heartbeat Analysis System (HBA) makes it possible to gather valuable data by measuring and analysing heart rate variability (HRV).

This data is based on decades of research and provides you with a detailed overview of how your body copes with stress. Our aim is to improve your health and performance in the long term by offering you a user-friendly and effective analysis system.

All-in-one package

A system developed by us, comprising a pre-configured high-resolution chest strap and software developed in-house.

Measurement of heart rate variability

Analysis of the regulation of the autonomic nervous system and the body's stress response using HRV measurement.

Monitoring stress hormone levels

Supportive measures to prevent mental and physical health problems.

HRV and Holistic Medicine

Our HRV is influenced by exercise, hormonal responses, metabolic and cognitive processes, as well as by stress and recovery. Regular analysis of the autonomic nervous system enables better individual recovery, as targeted measures can be taken to improve health. Poor HRV can indicate both physical and mental health conditions, making this analysis an essential component of holistic medicine. With its practical evaluation of HRV data, the HBA system is particularly well-suited for professional use. It stands out for its user-friendliness, making it easy for therapists to use and understandable for patients. Individual measurements can also be compared directly with one another to optimally illustrate the course of therapy. The reports can be sent to the patient or provided in printed form.

Prices

Heartbeat analysis Android Version (incl. Samsung Galaxy TabA8, Polar H9 Heart Rate Monitor) 3.290€ net plus VAT.

Heartbeat analysis iPad iOS Version (incl. iPad 9th Generation, Polar H9 Heart Rate Monitor) 3.490€ net plus VAT.

Heartbeat analysis without Tablet 2.900€ net plus VAT.

Financing

Of course, you can also conveniently have the units financed by our partners or a partner of your choice.

Analysis and performance

Our measurement system allows you to record and analyse meaningful data on your heart rate variability. We draw on the findings of decades of research to provide you with the best possible insight into how your body manages stress. Our aim is to improve your health and performance in the long term by offering you a simple analysis system.

Leading innovation partner for biohacking and longevity

With its extensive expertise in biohacking and longevity, HF-Concepts has established itself as a leading innovation partner, relying on state-of-the-art technologies and scientifically sound approaches.

At the helm of HF Concepts is Oskar Filenius, a visionary CEO with a deep understanding of the intersection of technology and healthcare. Under his leadership, the company has developed into an innovation leader, renowned for reliability, high quality standards and a strong customer focus. Oskar Filenius' passion for technological innovation and sustainable healthcare solutions drives the HF Concepts team to constantly seek out the best solutions for their customers and business partners, whilst keeping a close eye on all the latest innovations on the market.

For business partners, working with HF Concepts offers a strategic advantage: you gain access to exclusive, cutting-edge technologies, personalised consultancy and bespoke solutions for your business. Discover the future of the healthcare industry with HF Concepts and find out how you and your business can benefit from these pioneering technologies and strategies.

Are you ready for the upgrade of the future?

Oskar Filenius

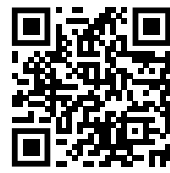

Welcome to our showroom

Our Biohacking & Longevity Showroom in Berlin-Adlershof is a unique place where cutting-edge technology meets human potential.

The showroom is an interactive experience space where visitors can discover the latest trends and products in the field of biohacking and longevity – it offers everything to make a biohacking enthusiast's heart beat faster.

Workshops, product demonstrations and talks, where experts share their knowledge with you, are also held here regularly. Our showroom in Adlershof is not only a place for information and inspiration, but also a meeting place for the biohacking community, where like-minded entrepreneurs can exchange ideas and network.

Come along and experience the latest innovations in biohacking and longevity for yourself!
